# **SIL Performance Data**

The Charollais Sheep NZ flock has many linkages, therefore the connectedness of this flock qualifies it to be evaluated against the rest of the Terminal industry with maximum accuracy that the performance analysis can provide. This is called the New Zealand Genetic Evaluation with the overall Terminal index now called New Zealand Terminal Worth (NZTW).

NZTW is the sum of the economic value of each sub index, Survival, Growth and Meat Yield.

Breeding values (BV's) are an estimate of genetic merit for a single trait. They are measured in the units of the trait, e.g, weaning weight BV is measured in kgs. Breeding value is calculated using information from the individual animal and its relatives, the deviation from the group average and the heritability of the particular trait.

Charollais Sheep NZ is very proud of their flock's position in the terminal sheep industry and has every confidence in trait improvements continuing for the financial benefit of its ram clients.
